Date of correction	Correction
January 14, 2015	**Page 39** New text is highlighted. **Page 41, Table 11** New data are highlighted.

The confidence intervals for the year 1990 in Table 11 were corrected as well as the significance level in the difference between 1990 and 1997 for infant mortality. The corresponding text to this change on page 39 was also changed as indicated below. The previous *1990* was changed to *1997* and the pervious word *were* was changed to *was*.

> For infant mortality rates, or deaths before the first birthday, the decrease in the rates between the consecutive years from 1997 to 2002 was significant, but the changes following 2002 were not found to be significant.

As shown in the table the highlighted confidence intervals for 1990 are changed and the previous * to indicate a p-value <0.05 for infant mortality is now removed. The difference itself of -5.3 was not changed.
